bankdata

Indholdsfortegnelse

Introduction

Bankdata format

General information   This document describes Bankdata's format for transactions which may be exchanged between the client and Bankdata. This is possible using Online Banking.

The following payment types is possible to sent/import:

- Own account transfers
- Domestic payments
- International payments
- Payments from accounts abroad
- Salery transfers
- Giro payments

The following information may be loaded from Bankdata/exported:

- Account entries
- Notice of giro payments
- Mastercard (Not Jyske Bank)
- Investments(Share prizes)
- Payee informations

File structure   All files always contain a start record and an end record.

All record fields are separated by comma and and each field is wrapped in quotes.
However CSV extracts are separated by a semicolon.
When exporting account entries, it is possible to use a dot or comma as the decimal separator in amount fields.

Each record must end with a <CR><LF>.

Payment file   All payment file records have a fixed length of 896 bytes. All fields have fixed length. If there is no data for a field, it have be filled with spaces.

Payment file example:

- Payment start
- International payments/cheques
- Domestic payments
- International payments/cheques
- Payments from accounts abroad
- Payment end

As shown in the example the same payment types do not have to follow each other in succession.

A payment can consist of several records. Each record numbered accending 0001, 0002, etc.

**Data file -
export/receipt**

Account entries, notice of giro payments (FI) and investments can only be exported in seperate files.
Export files contain variable-length records. Each field with data are completed. Fields without data is represented by ""."
Numbered files are without leading zeroes and text fields
is without trailing spaces.

Example of an account entry file:

- Account entries start
- Account entry
- Account entry
- Account entry
- Account entries end

An account entry can consist of several records. Each record numbered ascending 0001, 0002, etc.

Character set

Windows: ANSI
DOS: cp850 or cp865

If a field contains invalid characters, the system will try to convert them.

Description of fixed-length records

Example:

Field	Posi-tion	Data name	Format	To be com-pleted	Description
1	2	Transaction type	X(14)	Yes	Payment type = "IB030202000004"
2	19	Index	9(4)	Yes	Index no. = "0001"
3	26	Processing date	9(8)	Yes	Processing date (YYYYMMDD)
4	37	Transaction amount	9(13)+	Yes	Amount in øre or cent
5	54	Currency	X(3)	Yes	Currency
6	60	From-type	9(1)	Yes	Contents of "From account" "1" = Financial account "2" = Bank account

Field   Field number of the record.

Position   First position after opening quotation marks, i.e. first significant character position.

Data name   Field name.

Format   X(14)
A text field of 14 characters. Text is left justified with trailing spaces.
9 (4)
A numeric field of 4 digits. Digits are right justified with leading ze-roes.
9(13)+
A numeric field of 13 digits and a trailing sign (fixed position 14). The digits and sign are right justified with leading zeroes.
No decimal separator allowed in numeric fields. I.e. enter DKK 12.50 as "0000000001250+".

To be completed Yes
Completion of this field is mandatory. Additional remarks on the con-tents is below the table.

No
Completion of this field is optional.

See below
Remarks on the contents is below the table (conditional), e.g. spe-cific validations or dependencies on other fields.

Spaces
This field must be filled in with spaces.

Description   Field description. E.g. date format (see field 3) or valid data of a type field (see field 6).

Description of variable-length records

Example:

Field	Data name	Format	To be com-pleted	Description
1	Transaction type	X(14)	Yes	Payment type = "ED010103000002"
2	Record serial no.	9(5)	Yes	Consecutive record number
3	Book date	9(8)	Yes	Book date (YYYYMMDD)
4	Entry-amount	9(15)	Yes	Amount with 2 decimals. If the amount is negative the field contains a leading "-".
5	Account type	9(1)	Yes	Contents of "Account no.", field 6 "1" = Financial account "2" = Bank account
6	Account no.	9(15)	Yes	Account number

Field   Field number of the record.

Data name   Field name

Format   X(14)
                           A text field of a maximum of 14 characters.

                           9 (4)
                           A numeric field of a maximum of 4 digits.

                           9(15)
                           A numeric field of 15 digits and a trailing sign "-" if the amount is
                           negative.

                           In Online Banking, choose either a comma or dot as decimal separa-
                           tor.

To be completed   Yes
                           Completion of this field is mandatory. Additional remarks on the con-
                           tents is below the table.

                           * See below
                           Remarks on the contents is below the table, e.g. specific validations
                           or dependencies on other fields.

                           Spaces
                           The field may contain data.

Description   Field description, e.g. date format (see field 3) or valid data of a type
                           field (see field 5).

Payment start

Payment start (IB000000000000)

Field	Posi-tion	Data name	Format	To be com-pleted	Description
1	2	Transac-tiontype	X(14)	Yes	Payment type = "IB000000000000"
2	19	Creation date	9(8)	Yes*	Creation date (YYYMMDD)
3	30	Spaces	X(90)		Blank spaces = " "
4	123	Spaces	X(255)		Blank spaces = " "
5	381	Spaces	X(255)		Blank spaces = " "
6	639	Spaces	X(255)		Blank spaces = " "
7	895	End	X(2)	Yes	<CR><LF>

Field no.	**Description**
Field 2	Creation date of file with subsequent payments. The date must cor-respond with the date of the "Payment end" record.

Own account transfers

IB030201000002

Field	Posi-tion	Data name	Format	To be completed	Description
1	2	Transac-tiontype	X(14)	Yes	Payment type = "IB030201000002"
2	19	Index	9(4)	Yes	Index no. = "0001"
3	26	Expedition date	9(8)	Yes*	Creation date (YYYMMDD)
4	37	Transaction amount	9(13)+	Yes*	Amount in 'øre' or cent
5	54	Currency	X(3)	Yes*	Currency
6	60	From type	9(1)	Yes	Contents of "From account" "1" = Financial account "2" = Bank account
7	64	From ac-count	9(15)	Yes*	Account number sender
8	82	To reg.no.	9(4)	Yes*	Registration number of recipient
9	89	To account no.	9(10)	Yes*	Account number of recipient
10	102	Your refer-ence	X(35)	See below	Debtor's identification of payment
11	140	Spaces	X(20)		Spaces = " "
12	163	Spaces	X(255)		Spaces = " "
13	421	Spaces	X(255)		Spaces = " "
14	679	Reserved	X(215)		Not used, Spaces = " "
15	895	End	X(2)	Yes	<CR><LF>

Field no.	Description

Field 3   The following is checked when importing/receiving a file:

1. The system will change disposal dates, which are not banking days to the banking day immediately following such day.
2. The system will change invalid dates to today's date + 1 banking day.
3. The system will change dates prior to today's date to today's date + 1 banking day.

In Online Banking the disposal date may be today's date + 1 banking day or a date up to 18 month in the future.

Field 4   The amount must be positive and greater than 0. No decimal separa-tor is transmitted, i.e. the amount is stated in øre.

Field 5
The Currency may be in the currency of either the recipient or the senders account.

Field 7
The field may contain a bank account or financial account
The account type is determined by field 6 "From type".

Bank account: Online banking validates on receipt that the bank account exists in the system. If the account does not exist, an error messages occurs.

Bank account format: The bank account is 15 characters long and is composed of the following:
9(1) = 0
9(4) = Registration number
9(10) = Account number

Example: Payment to bank account no. 1111 1234567.
Bank account format: "011110001234567".

Financial account: Online Banking validates on receipt that the financial account exists in the system and automatically converts the account into the corresponding bank account. If the financial account does not exists, the file is rejected.

Financial account format:
The financial account is 15 characters long.

Field 8-9
Online banking validates on receipt that the account exists. If the account does not exist, an error messages occurs. Online Banking checks if the account owner is the same as from account in field 7.

Field 10
Field 10 is used by debtor to link a payment in the ERP system/payment in Online Banking to an entry in "From account". E.g. for automatic marking of invoices paid.

Domestic payments

IB030202000006

Structure   A domestic payment consists of up to 3 records characterised by the index numbers 1-3. Index 1 is mandatory.

Payment information (Index 1)

Field	Posi-tion	Data name	Format	To be com-pleted	Description
1	2	Transaction type	X(14)	Yes	Payment type = "IB030202000006"
2	19	Index	9(4)	Yes*	Index no. = "0001"
3	26	Processing date	9(8)	Yes*	Processing date (YYYYMMDD)
4	37	Transaction amount	9(13)+	Yes*	Amount in øre or cent
5	54	Currency	X(3)	Yes*	Currency
6	60	From type	9(1)	Yes	Contents of "From account" "1" = Financial account "2" = Bank account
7	64	From ac-count	9(15)	Yes*	Account number of sender
8	82	Payment type	9(1)	Yes	Always "2" = Transfer to bank ac-count
9	86	To-reg. No.	9(4)	Yes*	Registration number of recipient
10	93	To account no.	9(10)	Yes*	Account number of recipient
11	106	Clearing type	9(1)	Yes*	Payment type: "1" = Standard credit transfer "2" = same-day credit transfer "3" = Express credit transfer
12	110	Entry text	X(35)	Yes*	Entry text on recipient's bank statement
13	148	Name	X(32)	No	Name of recipient. It is recommended that the field be completed for use with pay-ment summary.
14	183	Address 1	X(32)	No	Address of recipient
15	218	Address 2	X(32)	No	Address of recipient
16	253	Postal code	9(4)	No	Postal code of recipient

17	260	Town name	X(32)	No	Town name of recipient
18	295	Your refer-ence	X(35)	See below	Debtor's identification of payment
19	333	Advice text 1	X(35)	See below	Advice text to recipient
20	371	Advice text 2	X(35)	See below	Advice text to recipient
21	409	Advice text 3	X(35)	See below	Advice text to recipient
22	447	Advice text 4	X(35)	See below	Advice text to recipient
23	485	Advice text 5	X(35)	See below	Advice text to recipient
24	523	Creditor identification of debtor	X(35)	See below	Eg customer no.
25	561	Reference to primary docu-ment	X(35)	See below	E.g., Invoice no.
26	599	Debtor iden-tification of payment	X(35)	See below	E.g. Your referene no.
27	637	End-to-end reference	X(35)	See below	E.g. agreed reference between creditor and debtor
28	675	Creditor ref-erence	X(35)	See below	Always start with RF
29	679	Easy account code	X(3)	See below	Possibilities: - NKC - NKV - NKP - NKR - NKS
30	895	Easy account ID	X(35)	See below	Recipient's social security no. (CPR), CVR no., CVR no. + P no., CVR no. + Se no. or Se no.
31	757	Reserved XML	X(35)	No	Not used, spaces = " "
32	795	Reserved XML	X(35)	No	Not used, spaces = " "
33	833	Reserved XML	X(35)	No	Not used, spaces = " "
34	871	Reserved XML	X(6)	No	Not used, spaces = " "
35	880	Blank space " "	X(14)	No	Spaces = " "
36	895	End	X(2)	Yes	<CR><LF>

Field no.	Description

Field 2

Index 1 is mandatory
Index 2-3 is optional

Field 3

The following is checked when importing/receiving a file:

1. The system will change processing dates that are not banking days to the banking day immediately following such day.
2. The system will change invalid dates to today's date.
3. The system will change dates prior to today's date to today's date.
4. If files with clearing type 3 (express credit transfer) are imported with a date in a weekend/holiday, they are posted immediately, but with exp. and posting date on the first banking day.

In Online Banking, the processing date may be today's date or a date up to 18 months in the future.

Field 4

The amount must be positive and greater than 0. No decimal separator will be transmitted, i.e. the amount is stated in øre or cent.
All amounts - irrespective of their signs – are considered positive numbers.

Field 5

Currency must be DKK or other currency, if recipient's account is within the bank.

Field 7

The field may contain a bank account or financial account. The account type is determined by field 6 "From type"

Bank account: On receipt Online Banking checks that the bank account exists in the system. If the account does not exist, an error message is displayed.

Bank account format:
The bank account is 15 characters long and is composed of the following:
9 (1) = 0
9 (4) = Registration number
9 (10) = Account number

Example: Payment to bank account no. 1111 1234567.
The bank account must be formatted "011110001234567".

Financial account: On receipt Online Banking checks that the financial account exists in the system and automatically converts the account into the corresponding bank account. If the financial account does not exist, the file is rejected.

Financial account format: The financial account is 15 characters long.

Example: Payment to financial account no. 123.
The financial account must be formatted "000000000000123"

Field 9-10	Fields 9-10 must be completed if the payment type is 2 "Transfer to bank account". Digits are right justified with leading zeroes.

The fields are not filled in an Easy Account transfer.
If the transfer is created as an Easy Account transfer, the following fields should be filled out instead:
- Field 29
- Field 30

If field 9 and 10 is filled in an Easy Account transfer, they are going to be replaced by recipient's Easy Account.

Field 11

The following is checked when importing/receiving a file:
If files with clearing type 3 (express credit transfer) are imported, with date ahead, they are changed to clearing type 2 (same-day credit transfer).

Clearing type 1 (standard credit transfer), clearing type 2 (same-day credit transfer) and clearing type 3 (Express credit transfer) are only possible in connection with payment type 2 (transfer to bank account).

Field 12

At least one of the following fields are mandatory:

1. Field 12 "Entry text" on index 1
2. Minimum one of the fields 19-23 (advice text) on index 1 or field 8-24 (advice text) on index 2 or field 3-21 (advice text) on index 3-
3. Minimum one of the fields 24-28 (reference fields) on index 1

Field 18

The field is used by the debtor to link a payment in the ERP system/payment in Online Banking to an entry in "From account". E.g. for automatic marking of invoices paid.

Field 19-23

See description of field 12.

Fields 24-26

If completed, fields 24 and 25 are transmitted to the recipient. Field 26 can be used in any troubleshooting situation and is transmitted to the recipient's computer centre.

If payment is made to another bank, please note that only the first 20 characters can be seen by the recipient/receiving bank.

See also description of field 12 in index 1

Field 27	End-to-end reference is a free text field where the debtor can enter a reference making it easier for the creditor to identify the payment.
	See also description of field 12 in index 1

Field 28	Payment with creditor reference may be created as either a standard credit transfer (clearing type 1) or a same-day credit transfer (clearing type 2). The following fields must not be completed in connection with a payment with creditor reference:

1. Entry text (field 12)
2. Creditor's identification of debtor (field 24)
3. Reference to primary document (field 25)
4. Advice text to recipient (fields 19-23, fields 8-24 index 2 and fields 3-21 index 3).

The creditor reference is up to 25 characters long and is alphanumeric. The creditor reference always starts with RF. The remaining characters may be alphanumeric and spaces.

See also description of field 12 in index 1

Field 29	If the payment is to be created as an Easy account payment, the field must be completed with one of the following codes

- "NKC" – when stating the recipient's CPR no.
- "NKV" – when stating the recipient's CVR no
- "NKP" – when stating the recipient's CVR no. + P no.
- "NKR" – when stating the recipient's CVR no. + SE no.
- "NKS" – when stating the recipient's SE no.

Please note that an agreement with your bank is required before Easy Account payments can be created.

The following fields must not be completed in connection with an Easy account payment:
- Field 9
- Field 10

If these fields are completed they will be replaced by the recipient's Easy Account.

Field 30	The field must be completed with the recipient's CPR no., CVR no., CVR no. + P no., CVR no. + SE no., or SE no.

The format of the recipient's CVR no. + P no. must be as follows:
- 12345678/0123456789

The format of the recipient's CVR no. + SE no. must be as follows:

- 12345678/12345678

Sender information and reference fields (Index 2)

In a "Transfer to bank account" may contain up to 41 advice lines. The first five advice lines are imported from index 1, the next 17 are in index 2 and the last 19 are in index 3. Index 2 and 3 are optional.

Field	Posi-tion	Data name	Format	To be com-pleted	Description
1	2	Transaction type	X(14)	Yes*	Paymenttype = "IB030202000006"
2	19	Index	9(4)	Yes*	Index nr. = "0002"
3	26	Sender 1	X(35)	See below	Sender information line 1
4	64	Sender 2	X(35)	See below	Sender information line 2
5	102	Sender 3	X(35)	No	Sender information line 3
6	140	Sender 4	X(35)	No	Sender information line 4
7	178	Sender 5	X(35)	No	Sender information line 5
8-24	From 216	Advice text 6-22	X(35)	See below	
25	862	Spaces	X(32)		Blank spaces = " "
26	895	End	X(2)	Yes	<CR><LF>

Field no.	Description
Fields 3-7	If sender information is provided the two first lines must always be completed. However, sender information may consist of spaces. If no sender information is provided, the name and address of "From account" are sent to the recipient.
Fields 8-24	Index 2 indicates the advice lines included in the record. Fields 8-24, advice lines 6 to 22 inclusive. See description of field 12 in index 1.

Advice lines (Index 3)
A payment may contain up to 41 advice lines. The first five advice lines are imported from index 1, the next 17 are in index 2 and the last 19 are in index 3. Index 2 and 3 is optional.

Field	Posi-tion	Data name	Format	To be completed	Description
1	2	Transaction type	X(14)	Yes	Payment type = "IB030202000005"
2	19	Index	9(4)	Yes	Index no. = "0003" or "0004"

Field	Posi- tion	Data name	Format	To be completed	Description
3- 21	from 26	Advice text	X(35)	See below	Advice text to recipient
25	862	Spaces	X(146)		Blank spaces = " "
26	895	End	X(2)	Yes	<CR><LF>

Field no.   **Description**

Fields 3-21   Index 3 indicates the advice lines included in the record.

                                   Fields 3-21, advice lines 23 to 41 inclusive.
                                   See description of field 12 in index 1.

International payments/cheques

IB030204000004

Description   An international payment consists of 2 records, index 1 and index 2.
Index 1 consists of information about the payment. Index 2 consists of information about settlement of payment

Payment information etc. (Index 1)

Field	Posi-tion	Data name	Format	To be com-pleted	Description
1	2	Transac-tion type	X(14)	Yes	Payment type = "IB030204000004"
2	19	Index	9(4)	Yes	Index= "0001"
3	26	Pro-cessing date	9(8)	Yes*	Processing date (YYYYMMDD)
4	37	Transac-tion amount	9(13)+	Yes*	Amount in foreign currency with no decimal separator
5	54	From type	9(1)	Yes	Contents of "From account" "1" = Financial account "2" = Bank account
6	58	From ac-count	9(15)	Yes*	Account number of sender
7	76	Currency code	X(3)	Yes*	Settlement currency
8	82	Payment currency	X(3)	No	Required if payment is made in a currency other than the currency stated in field 7
9	88	Payment type	9(2)	See below	Payment type
10	93	Payment message 1	X(35)	See below	Payment specification (line 1)
11	131	Payment message 2	X(35)	See below	Payment specification (line 2)
12	169	Payment message 3	X(35)	See below	Payment specification (line 3)
13	207	Payment message	X(35)	See below	Payment specification (line 4)

Field	Posi-tion	Data name	Format	To be com-pleted	Description
		4			
14	245	Recipient	X(35)	Yes*	Name of recipient
15	283	Address 1	X(35)	See below	Address of recipient (line 1)
16	321	Address 2	X(35)	No	Address of recipient (line 2)
17	359	Country	X(35)	No	Not used anymore Blank spaces = " "
18	397	From ICM ac-count	X(34)	See below	BBAN/IBAN-no. sender
19	434	SWIFT address of sender	X(11)	See below	BIC address (SWIFT) of sending bank
20	448	Spaces	X(45)	No	Blank spaces = " "
21	496	Spaces	X(75)	No	Blank spaces = " "
22	574	Spaces	X(75)	No	Blank spaces = " "
23	652	Spaces	X(24)	No	Blank spaces = " "
24	679	Spaces	X(215)	No	Blank spaces = " "
25	895	End	X(2)	Yes	<CR><LF>

Field no.	**Description**

Field 3   The following is checked when importing/receiving a file:

1. The system will change processing dates that are not banking days to the banking day immediately following such day.
2. The system will change invalid dates to today's date.
3. The system will change dates prior to today's date to today's date.
4. If files with clearing type 3 (express credit transfer) are im-ported with a date in a weekend/holiday, they are posted im-mediately, but with exp. and posting date on the first banking day.

In Online Banking, the processing date may be today's date or a date up to 18 months in the future.

Field 4   The amount must be positive and greater than 1. Do not use decimal separator. Example:
EUR 100.50 (100 euro and 50 cents): "0000000010050+".

All amounts are considered positive numbers irrespective of their signs.

Field 6	The field may contain a bank account or financial account. The account type is determined by field 5 "From type".

Bank account: The system checks that the account exists. If the account does not exist, an error message is displayed.

Bank account format:
The bank account is 15 characters long and is composed of the following:
9(1) = 0
9(4) = Registration number
9(10) = Account number

Example: Payment to bank account no. 1111 1234567. Bank account format: "011110001234567".

Financial account: On receipt, Online Banking checks that the financial account exists in the system and automatically converts the account into the corresponding bank account. If the financial account does not exist, the file is rejected.

Financial account format:
The financial account is 15 characters long.
Example: Payment to financial account no. 123. Financial account format: "000000000000123". |
| Fields 7-8 | Field 8 must be completed only if the settlement currency (field 7) differs from the payment currency.

Example:

The settlement amount is equal to EUR 1000.00; however the amount (equivalent) is to be transferred in USD.
Enter EUR in field 7 (currency code) and USD in field 8 (payment currency).
If the settlement currency and payment currency are identical, field 8 should not be completed.

For SEPA/EU payments (field 9 = 97) can only be "EUR".
If field 7 does not contain "EUR", field 8 has to be "EUR".
If field 8 is empty, field 7 has to be "EUR". |
| Field 9 | Payment type. See options in Online Banking. The following options may be applied as a minimum:

Code	Payment type
21	International cheque
53	Ordinary payment
57	Express payment

As regards other payment types, read index International payments.

If 53 "Ordinary payment" is selected, the payment will be changed to SEPA payment, provided the SEPA payment terms are met. |

IBAN and BIC should be stated if possible. This is a requirement in several countries.

As regards payment type 21 "International cheque", field 4 in index must be completed. Fields 5-12 in index 2 should not be completed. As regards other payment types, field 4 in index 2 should not be completed. Fields 5-12 in index 2 must be completed as described in index 2.

As regards SEPA/EU payments (SEPA) the field has to be 97.

Fields 10-13	One of the fields must be completed.
Fields 10-16	The SWIFT character set is valid. Click here to see the SWIFT character set.
Field 18	ICM from account, when field 5 –from-type- is completed with 3 = ICM account. The account number should be left justified. It can be formatted as foreign account number (BBAN) or as IBAN-no.
Field 19	BIC-address, when field 5 – from type – is completed with 3 = ICM-account.

Payment settlement information (Index 2)

Field no.	Description

Field no.   **Description**

Field 3   For SEPA/EU payments, the field should always have the value 0

Field 4   Field 4 must be completed if field 9 (payment type) of index 1 has been completed with 21 "International cheque".
Fields 5–13 should not be completed.

Field 5   For SEPA/EU payments, field 5 (SWIFT address) must be present with a valid SWIFT address.

Fields 5-9   Complete field 5 (SWIFT address) or fields 6-9 (banker).

                              If the banker is entered, the completion of the following fields is mandatory:

- Field 6 (bank name)
- Field 7 (bank address 1) or field 8 (bank address 2)
- Field 9 (bank country)

Fields 5-11   The SWIFT character set is valid. Click here to see the SWIFT character set.

Field 6-10   SEPA/EU payments does not use fields 6-10.

Field 10   Field format:

                              Bank code ID (2 characters) Bank code contents (3-11 characters)

                              Example:

                              Bank code (Fedwire routing number (FED, ABA)) for USA: FW123456789

                              The field should not be completed if:

- Fields 5 and 12 have been completed.
- Field 5 contains a SWIFT address of 11 characters.

Field 11   SEPA/EU payment, don't complete field

Fields 11-12   Only one of the fields may be completed.

Field 12   The field must contain a valid IBAN.

                    Example of an IBAN:

                    DE89370400440532013000

                    The first two characters are a 2-letter country code. They are fol-
                    lowed by two check digits and a domestic account number.

                    SEPA/EU payment, field is mandatory.

Field 13   If field 3 has been completed with 1, field 13 must be completed with
                    1.

                    SEPA/EU payment field must be 1.

Field 15-17   Fields are optional and can be filled with all payment types, except
                    SEPA/EU payments (payment types = 97).

Field 18   Field 18 is used by the debtor to link a payment in the ERP
                    system/payment in Online Banking to an entry in "From account"

                    E.g. for automatic marking of invoices paid.

SWIFT character set

When importing a file certain fields are checked to ensure that the characters used belong to the SWIFT character set.

The first character of a text string must be checked specifically. The following characters are valid:	The following characters are included in the SWIFT character set – i.e. the following characters are valid:
A-Z	A-Z
a-z	a-z
0-9	0-9
	SPACE
/	/
	-

Payment from accounts abroad

IB030204000004

| **Description** | | A "Payment from account abroad" consists of 2 records, index 1 and index 2. | | | |

Payment information etc. (Index 1).

Field	Pos.	Data name	Format	To be com-pleted	Description
1	2	Transaction type	X(14)	Yes	Payment type = "IB030204000004"
2	19	Index	9(4)	Yes	Index= "0001"
3	26	Processing date	9(8)	Yes*	Processing date (YYYYMMDD)
4	37	Transaction amount	9(13)+	Yes*	Amount in foreign currency with no decimal separator
5	54	From type	9(1)	Yes*	Contents of "From account" "1" = Financial account "2" = Bank account "3" = ICM-account
6	58	From account	9(15)	No	Account number of sender
7	76	Currency code	X(3)	Yes	Settlement currency
8	82	Payment cur-rency	X(3)	No	Not applicable
9	88	Payment type	9(2)	See be-low	Payment type
10	93	Payment mes-sage 1	X(35)	See be-low	Payment specification (line 1)
11	131	Payment mes-sage 2	X(35)	See be-low	Payment specification (line 2)
12	169	Payment mes-sage 3	X(35)	See be-low	Payment specification (line 3)
13	207	Payment mes-sage 4	X(35)	See be-low	Payment specification (line 4)
14	245	Recipient	X(35)	Yes	Name of recipient
15	283	Address 1	X(35)	See be-low	Address of recipient (line 1)

Field	Pos.	Data name	Format	To be com-pleted	Description
16	321	Address 2	X(35)	See be-low	Address of recipient (line 2)
17	359	Country	X(35)	No	No longer used, Blank spaces = " "
18	397	From ICM ac-count	X(34)	See be-low	BBAN/IBAN, sender
19	434	SWIFT address of sender	X(11)	See be-low	BIC address (SWIFT) of sending bank
20	448	Spaces	X(45)	No	Blank spaces = " "
21	496	Spaces	X(75)	No	Blank spaces = " "
22	574	Spaces	X(75)	No	Blank spaces = " "
23	652	Spaces	X(24)	No	Blank spaces = " "
24	679	Spaces	X(215)	No	Blank spaces = " "
25	895	End	X(2)	Yes	<CR><LF>

Field no.	**Description**

Field 3

The following is checked when importing/receiving a file:

1. The system will change processing dates which are not bank-ing days to the banking day immediately following such da
2. The system will change dates up to 30 days back in time to today's date.

In Online Banking, the processing date may be today's date or a date up to 90 days in the future.

Field 4

The amount must be positive and larger than 1, and without comma. E.g. 100.50 EUR (100 euro and 50 cent) is represented as "0000000010050+".

Field 5

If the field is completed with 1 (financial account) or 2 (bank ac-count/shadow account):

- field 6 - From account must be completed and
- field 18 – From ICM account and field 19 – SWIFT address of sender must be left blank.

If the field is completed with 3 (ICM account):

- field 6 – From account must be left blank and
- field 18 – From ICM account and field 19 – SWIFT address of sender must be completed.

Field 6	The field may contain a bank account, a financial account or an ICM account. The account type is determined by field 5 "From type".

Bank account: The system checks that the account exists. If the account does not exist, an error message is displayed. The bank account you must use is an internal account (shadow account number) to be provided by the bank.
Bank account format:
The bank account is 15 characters long and is composed of the following:

9(1) = 0
9(4) = 9844 (Jyske bank 9999)
9(10) = Shadow account number

Example: Payment from bank account (shadow account number) 1234567. Bank account format: "098440001234567" (099990001234567 for Jyske Bank).

The shadow account number of the foreign account may be obtained by contacting bank's Hotline.

Financial account: On receipt, Online Banking checks that the financial account exists in the system and automatically converts the account into the corresponding bank account. If the financial account does not exist, the file is rejected.

Financial account format:
The financial account is 15 characters long.
Example: Payment from financial account no. 123. Financial account format: "000000000000123".

Please note: Field 6 must not be completed if field 18 – From ICM account and field 19 – BIC address of sender have been completed.

Field 9	The following payment types may be used for "Payments from accounts abroad":

Code Payment type
83 ICM Ordinary payment
84 ICM Express payment
85 ICM Repatriation
86 ICM Intra-group payment
88 ICM Foreign giro payment

Information about other types can be seen in the reference foreign payment types

Fields 10-16	The SWIFT character set is valid. Click here to see the SWIFT character set.

Field 18 Enter From ICM account when field 5 – From type is completed with 3 = ICM account. The account number must be left justified. The format may be like a foreign account number (BBAN) or IBAN.

Field 19 Enter the BIC address of the sending bank when field 5 – From type is completed with 3 = ICM account.

Additional information (Index 2)

Field	Position	Data name	Format	To be completed	Description
1	2	Trans-type	X(14)	Yes	Payment type = "IB030204000004"
2	19	Index	9(4)	Yes	Index = "0002"

39	725	Blank	X(169)	No	Blank spaces = " "
40	895	END	X(2)	Yes	<CR><LF>

Field no.	Description
Field 5	If the field is completed the Swift address has to be correct.
Fields 5-6	Only one of the fields may be completed.
Fields 5-11	The SWIFT character set is valid. Press CTRL and click here to see the SWIFT character set.

Field 10

Field format:
Bank code ID (2 characters) Bank code contents (3-11 characters).
No spaces allowed.
Example:
Bankcode (Fedwire routing number (FED, ABA)) for USA:
FW123456789

The field should not be completed if:

- Fields 5 and 12 have been completed
- Field 5 contains a SWIFT address of 11 characters

Fields 11-12   Only one of the fields may be completed.

Field 12   Field must contain valid IBAN.
                                Example of an IBAN:
                                DE89370400440532013000.
                                The first two characters are the country code. They are followed by
                                two check digits and the original account number.

Field 13   If field 3 has been completed with 1, field 13 must be completed with
                                1.
                                As regards "Payments from accounts abroad" the field relates to
                                charges by the recipient's bank.

Field 18   Used by debtor to link a payment in the ERP system/payment in
                                Online Banking to an entry in "From account", eg for automatic
                                marking of invoices paid.

Wage transfers

IB030205000004

Description   A wage consist of one record of index 1 and a number of index 2. Index 1 contains employer information. Index 2 contains employee information.

Employer information (Index 0001)

Field	Posi-tion	Data name	Format	To be completed	Description
1	2	Transaction type	X(14)	Yes	Transactiontype = "IB030205000004"
2	19	Index	9(4)	Yes	Index = "0001" (header)
3	26	Disposal date	9(8)	Yes *	Date of disposal (YYYYMMDD)
4	37	Amount balancing	9(13)+	See below	Balanced amount in øre Mus be balance of amount in Index 2
5	54	From type	9(1)	Yes	Contents of "From account" "1" = Financial account "2" = Bank account
6	58	From ac-count	9(15)	Yes	Account number of sender
7	76	Number – recipients	9(6)	See below	Number of wage earners comprised by the wage transfer

20	679	Reserved	X(215)		Blank spaces = " "
21	895	End	X(2)	Yes	<CR><LF>

Field no.	Description

Field 3

The following is checked when importing/receiving a file:
1. The system will change disposal dates which are not banking days to the banking day immediately following such day.
2. The system will change invalid dates to today's date + one banking day.
3. The system will change dates prior to today's date to today's date + one banking day.

In Online Banking the disposal date may be today's date + one banking day or a date up to 18 months in the future.

Field 4

The amount must be positive and greater than 0. No decimal separator will be transmitted, ie the amount is stated in øre.

Field 6

The field may contain a bank account or financial account. The account type is determined by field 5 "From type".

Bank account: On receipt Online Banking checks that the bank account exists in the system. If the account does not exist an error message is displayed.
The account must be a DKK account.
Bank account format: The bank account is 15 characters long and is composed of the following:
9(1) = 0
9(4) = Registration number
9(10) = Account number

Example: Payment to bank account no. 1111 1234567. Bank account format: "011110001234567".

Financial account: On receipt Online Banking checks that the financial account exists in the system and automatically converts the account into the corresponding bank account. If the financial account does not exist the file is rejected.

Financial account format: The financial account is 15 characters long.

Example: Payment to financial account no. 123. Financial account format: "000000000000123".

Field 7   Number of wage earners comprised by the wage transfer.

Field 17   The field is used by the debtor to link a payment in the ERP system/payment in Online Banking to an entry in "From account", eg for automatic marking of invoices paid.

Employee information (Index 0002)

Field	Posi-tion	Data name	Format	To be completed	Description
1	2	Transac-tion type	X(14)	Yes	Payment type = "IB030205000004"

28	895	End	X(2)	Yes	<CR><LF>

Field no.   **Description**

Field 3   The following is checked when importing/receiving a file:

    1. The system will change processing dates which are not bank-ing days to the banking day immediately following such day.
    2. The system will change invalid dates to today's date.
    3. The system will change dates prior to today's date to today's date.

In Online Banking the processing date may be today's date or a date up to 18 months in the future.

Field 4   The amount must be positive and greater than 0. No decimal separator will be transmitted, ie the amount is stated in øre.

All amounts are considered positive numbers irrespective of their signs.

Field 6   The field may contain a bank account or financial account. The account type is determined by field 5 "From type".

Bank account: On receipt Online Banking checks that the bank account exists in the system. If the account does not exist an error message is displayed.

The account must be a DKK account.

Bank account format: The bank account is 15 characters long and is composed of the following:
9(1) = 0
9(4) = Registration number
9(10) = Account number

Example: Payment to bank account no. 1111 1234567. Bank account format: "011110001234567".

Financial account: On receipt Online Banking checks that the financial account exists in the system and automatically converts the account into the corresponding bank account. If the financial account does not exist the file is rejected.

Financial account format: The financial account is 15 characters long.

Example: Payment to financial account no. 123. Financial account format: "000000000000123".

Field 7   The giro code determines the structure/contents of the payment ID and whether the advice text may be imported. For instance, certain giro codes do not allow the entry of payment ID – however the advice text may be entered.

As regards giro codes 01, 73 and 75 advice may be transmitted to the recipient.

As regards giro codes 01 and 73 the name and address of the sending account holder will automatically be transmitted as sender information to the recipient.

If the bank's system receives a payment with a giro code which is unknown to the system, the payment will be rejected and an error message will be displayed. The giro code may be unknown to the system due to one of the following reasons:

- The giro code is "physical". The giro payment must be made at the bank or at the post office.
- Data entry error.

Field 8   Completion of the payment ID field depends on the giro code, eg:

Giro code 01 Payment ID should not be provided.
Giro code 04 Payment ID of 13-16 digits (modulus 10 control).
Giro code 15 Payment ID of 13-16 digits (modulus 10 control).
Giro code 71 Payment ID of up to 15 digits (modulus 10 control).
Giro code 73 Payment ID should not be provided.
Giro code 75 Payment ID of up to 16 digits (modulus 10 control).

If the giro code is blank (indicated by two spaces) the first digit of the payment ID must be 2, 4 or 8, + 17 digits + modulus control digits, ie a payment ID totalling 19 digits.

Positions exceeding the maximum digit number must be blank. Example: four spaces (giro code 71) and three spaces (giro code 75).

Field 9   The field is reserved for the giro registration number. The field is currently not used.

Fields 10-11   Only one of the fields may be completed. The contents are modulus checked.

Field 13   The field is used in connection with the export of payments in Online Banking. The field contains the name from the PBS register.
When importing payments the field should not be completed.

Field 14   The field is used by the debtor to link a payment in the ERP system/payment in Online Banking to an entry in "From account", eg for automatic marking of invoices paid.

Fields 15-19   Sender information may be provided in relation to giro codes 01 and 73 (field 7).

If no sender information is provided, the name and address of "From account" are sent to the recipient.

Fields 20-25   Sender information may be provided in relation to giro codes 01, 73 and 75 (field 7).

Advice record (Index 2 or 3)

Description	As regards giro code 01 up to 26 advice lines may be transmitted and as regards giro codes 73 and 75 up to 41 advice lines may be transmitted. Index 1 contains advice lines 1-6. If additional advice lines are required index 2 and possibly index 3 are used.

Field	Posi-tion	Data name	Format	To be com-pleted	Description
1	2	Transac-tion type	X(14)	Yes	Payment type = "IB030207000002"
2	19	Index	9(4)	Yes	Index = "0002" eller "0003"
3-24	from 26	Advice text	X(35)	See below	Advice text to recipient
25	862	Spaces	X(32)		Blank spaces = " "
26	895	Ebd	X(2)	Yes	<CR><LF>

Field no.	**Description**
Field 2	The index indicates the advice lines included in the record.

Index "2" = advice lines 7-28
Index "3" = advice lines 29-41

As regards giro payments containing 26 advice lines the advice must be structured as follows:

advice lines 1-6 in index 1
advice lines 7-26 in index 2, advice lines 27-28 must be blank
index 3 is not used.

As regards giro payments containing 41 advice lines the advice must be structured as follows:

advice lines 1-6 in index 1
advice lines 7-28 in index 2
advice lines 29-41 in index 3

Payment end

IB999999999999

Field	Posi-tion	Data name	Format	To be com-pleted	Description
1	2	Transac-tion type	X(14)	Yes	Payment type = "IB999999999999"
2	19	Crea-tions date	9(8)	Yes*	Creation date (YYYYMMDD)
3	30	Number of trans-actions	9(6)	Yes*	Number of payments
4	39	Total amount	9(13)+	Yes*	Hash total
5	56	Spaces	X(64)		Blank spaces = " "
6	123	Spaces	X(255)		Blank spaces = " "
7	381	Spaces	X(255)		Blank spaces = " "
8	639	Spaces	X(255)		Blank spaces = " "
9	895	End	X(2)	Yes	<CR><LF>

Field no.	Description

Field no.   **Description**

Field 2   Creation date of file with preceding payments. The date must corre-spond with the date of the "Payment start" record, otherwise the payment batch/import is rejected.

Field 3   Count of payments of type "IB=03XXXXXXXXX"
with Index = "1" placed between preceding "Payment start" and this record. If this count does not match the payment batch/import is re-jected.

Field 4   Count of field "Transaction amount" of payment type "IB=03XXXXXXXXX" between preceding "Payment start" and this record.

Only records with index = "1" must be counted.

No decimal separator will be transmitted, ie the amount is stated in øre. The count is independent of the currency code, ie the amounts are added up directly without translation and any sign.
The aggregate amount is stated as a positive amount.

Account entries, 1st edition, Individual entries, Fixed format

Account entries

Structure   Account entries have a start record, a number of entry records and an end record – all of variable lengths. All entry records are itemised entries. The multiple entries which can be viewed in Online Banking will not be displayed in the extract of account entries.

Startrecord (ED000000000001)

Field	Data name	Format	To be completed	Description
1	Transaction type	X(14)	Yes	Paymenttype = "ED000000000001"
2	Creation date	9(8)	Yes	Creation date (YYYYMMDD)

16	Sender – 5	X(35)	See below	Sender information
17	Creditor ID	X(35)	See below	Creditor's identification of debtor
18	Reference	X(35)	See below	Reference of primary document
19	Debtor ID	X(35)	See below	Debtor's identification of payment
20	Your refer-ence	X(10)	No	References no. Is exported from Online banking productname, if a reference has been entered in the list of account entries. Otherwise blank.
21	Attachment no.	9(18)	Yes	The banks identification of the entry
22	Message line	X(35)	See below	Message text
23	Spaces	X(37)		Space = " "
24	End	X(2)	Yes	CR + LF

Field no.   **Description**

Field 7   The field may contain a bank account or financial account. The account type is determined by field 5 "Account type".

                            Bank account:

                            Bank account format:
                            The bank account is 15 characters long and is composed of the following:
                            9(1) = 0
                            9(4) = Registration number
                            9(10)= Account number

                            Example: Export of entries from bank account no. 1111 1234567.
                            Bank account format: "011110001234567".

                            Financial account:

Financial account format:
The financial account is 15 characters long.

Example: Export of entries from financial account no. 123. Financial account format: "000000000000123".

Field 8   The field is completed only if the Bank has entered a value date.

Field 9   No commas are send. Amount with 2 decimals followed by a sign.

Field 12-16   Fields may contain information on the sender.

Field 17-19   At least one of these fields is completed if a message has been at-tached and none of the "Message line" fields are completed.

Field 20   The field is exported from Online Banking if a reference has been en-tered in the list of account entries.

Field 21   Attachment no. Is connected as following:
                                First 2 numbers decides the type

                                70 = individual entry
                                71 = An itemised entry (eg the first entry under a multiple entry)
                                72 = multiple entry

                                Next 2 numbers are year and
                                The next 3 numbers are number of the day

                                The last numbers are unique for the transaction.

                                Example: Attachment no. : 7017328347643720000
                                This is an individual entry
                                 on day 328 in 2017 with the reference 34764372000

Field 22   First line in Message text

Message record (ED010103000001)

Field	Dataname	Format	To be com- pleted	Description
1	Transaction type	X(14)	Yes	Payment type = "ED010103000001"
2	Index	X(1)	Yes	Index no. = "2-4"
3- 17	Messagelines	X(35)	See below	Message text
18	Spaces	X(5)		Space = " "
19	End	X(2)	Yes	<CR><LF>

Field no.   **Description**

Field 2   Index indicates the messagelines, included in the record:
                 "2" = Messageline 2-16
                 "3" = Messageline 17-31
                 "4" = Messageline 32-41

                 It is possible to have up to 3 records of this type, where space is
                 available for 15 Messagelines in index 2 and 3. In index 4 the last 5
                 messagelines are not used (field 13-17).

End record (ED999999999999)

Field	Data name	Format	To be com- pleted	Description
1	Transaction type	X(14)	Yes	Payment type = "ED999999999999"
2	Creation date	9(8)	Yes	Creation date (YYYYMMDD)
3	Number of transac- tions	9(6)	Yes	Number of account entries (index 1)
4	Total amount	9(13)+	Yes	Total amount
5	Spaces	X(540)		Space = " "
6	End	X(2)	Yes	<CR><LF>

Field no.   **Description**

Field 2   Creation date of file with preceding account entries. Date must corre-
                 spond with the date of "Account entries (Start record)".

Field 3   Count of entries of type "ED010103000001" placed between
                 "Account entries start" and this record.

Field 5   Count of "Entry amount" in record type "ED010103000001 " without
                 any sign placed between the preceding "Account entries start" and

this record. The amount is positive. It is a "Hash total", to be used for control of the export.

Account entries, 2nd edition, Individual Entries, decimal separator: Dot

Account entries

Structure   Account entries have a start record, a number of entry records and an end record. All entry records are specifik entries. The multiple entries viewed in Online Banking will not be displayed in the extract of account entries.

Startrecord (ED000000000000)

Field	Data name	Format	To be com-pleted	Description
1	Transaction type	X(14)	Yes	Payment type = "D000000000000 "
2	Creation date	9(8)	Yes	Date of creation (YYYYMMDD)

70	End	X(2)	Yes	<CR><LF>

Field no.   **Description**

Field 6   The field may contain a bank account or financial account. The ac-
                           count type is determined by field 5 "Account type".

                           Bank account:

                           Bank account format:
                           The bank account is 15 characters long and is composed of the fol-
                           lowing:
                            9(1) = 0
                            9(4) = Registration number
                            9(10) = Account number

                           Example: Export of entries from bank account no. 1111 1234567.
                           Bank account format: "011110001234567

                           Financial account:

                           Financial account format:

                           The financial account is 15 characters long.

	Example: Export of entries from financial account no. 123. Financial account format: "000000000000123".
Field 7	The field is completed only if the Bank has entered a value date.
Field 8	Amount with 2 decimals. Decimal: Dot
Field 11-15	Fields may contain information on the sender.
Field 16-18	At least one of these fields is completed if a message has been at-tached and none of the "Message line" fields are completed.
Field 19	The field comes from a payment initiated by the debtor and is used to link a payment in the ERP system/payment in Online Banking to an entry in "From account", eg for automatic marking of invoices paid.
Field 20	The field is exported from Online Banking if a reference has been en-tered in the list of account entries.
Field 21	Attachment no. format: First 2 numbers decides the type 70 = individual entry 71 = An itemised entry (eg the first entry under a multiple entry) 72 = multiple entry The next two numbers are years and The next three numbers are numbers of the day. The last digits is a unique reference Exampel: Attachment no. : 701732834764372000 This is an individual entry on date 328 i 2017 with reference 34764372000
Field 23-25	If the entry has been exchanged to the currency of the account in connection with the booking, exchange information may be displayed in these fields.
Field 26-28	If the entry has been received via another financial institution which has exchanged the amount before transmitting it for booking the ini-tial information may be displayed in these fields.
Fields 29-69	Fields may contain up to 41 message lines.

End record (ED999999999999)

Field	Data name	Format	To	Beskrivelse
1	Transaction type	X(14)	Yes	Payment type = "ED999999999999"
2	Creation date	9(8)	Yes	Creation date (DD-MM-YYYY).
3	Creation time	9(6)	Yes	Creation time (HHMMSS)
4	Number of transac- tions	9(5)	Yes	Number of account entries
5	Total amount	9(15)	Yes	Total amount, the aggregate of the field "Entry amount
6	End	X(2)	Yes	<CR><LF>

Field no.	Description

Field 2   Creation date of file with preceding account entries. The date must correspond with the date of "Account entries (Start record)".

Field 3   Creation time of file with preceding account entries. The time must correspond with the time of "Account entries (Start record)".

Field 4   Count of entries of type "ED010103000002" placed between the pre- ceding "Account entries start" and this record.

Field 5   Count of "Entry amount" in record type "ED010103000002" without any sign placed between the preceding "Account entries start" and this record. The amount is positive (hash total).

Account entries, 3rd edition, Individual Entries, decimal separator: Comma or dot

Account entries

Structure

Account entries have a startrecord, a number of entry records and an end record. All entry records are itemised entries. The multiple entries which can be viewed in Online Banking will not be displayed in the extract of account entries.

3rd edition can be found in the following variations:

	Startrecord	Entryrecord	Endrecord
Individual entries Decimal: Comma	ED000000000003	ED010103000003	ED999999999999
Individual entries Decimal:dot	ED000000000003	ED010103000003	ED999999999999

Field no.	Description

Field 6

The field may contain a bank account or financial account. The ac- count type is determined by field 5 "Account type".

Bank account:

Bank account format: The bank account is 15 characters long and is composed of the following:
9(1) = 0
9(4) = Registration number
9(10) = Account number

Example: Export of entries from bank account no. 1111 1234567. Bank account format: "011110001234567".

Financial account:

Financial account format: The financial account is 15 characters long.

Example: Export of entries from financial account no. 123. Financial account format: "000000000000123".

Field 7

The field is completed only if the bank has entered a value date.

Field 8

Amount with two decimals. Decimal separator: Dot

Fields 11-15

The fields may contain information on the sender.

Fields 16-18

At least one of these fields is completed if a message has been at- tached and none of the message line fields are completed.

Field 19

The field comes from a payment initiated by the debtor and is used to link a payment in the ERP system/payment in Online Banking to an entry in "From account", eg for automatic marking of invoices paid.

| Field 20 | The field is exported from Online Banking if a reference has been entered in the list of account entries. |
| Field 21 | The entry ID is composed as follows: |

The first two digits determine the type:

70 = an individual entry
71 = an itemised entry (eg the first entry under a multiple entry)
72 = multiple entry

The next two digits are the year and
The next three digits are the day number

The last digits are unique to the entry.

Example Entry ID: 701432834764372000
This is an individual entry
 on day 328 in 2017 with the reference 34764372000

| Fields 23-25 | If the entry has been exchanged to the currency of the account in connection with booking, exchange information may be displayed in these fields. |

| Fields 26-28 | If the entry has been received via another bank which has exchanged the amount before transmitting it for booking, the initial information may be displayed in these fields. |

| Fields 29-69 | The fields may contain up to 41 message lines. |

End record (**ED999999999999)**

Field	Data name	Format	To be completed	Description

Field no.	Description
Field 6	The field may contain a bank account or financial account. The account type is determined by field 5 "Account type".

Bank account:

Bank account format: The bank account is 15 characters long and is composed of the following:
9(1) = 0
9(4) = Registration number
9(10) = Account number

Example: Export of entries from bank account no. 1111 1234567. Bank account format: "011110001234567".

Financial account:

Financial account format: The financial account is 15 characters long.

Example: Export of entries from financial account no. 123. Financial account format: "000000000000123".

Field 7	The field is completed only if the bank has entered a value date.
Field 8	Amount with two decimals. Decimal separator: Comma
Fields 11-15	The fields may contain information on the sender.
Fields 16-18	At least one of these fields is completed if a message has been attached and none of the message line fields are completed.

Field 19	The field comes from a payment initiated by the debtor and is used to link a payment in the ERP system/payment in Online Banking to an entry in "From account", eg for automatic marking of invoices paid.
Field 20	The field is exported from Online Banking if a reference has been entered in the list of account entries.
Field 21	The entry ID is composed as follows:

The first two digits determine the type:

70 = an individual entry
71 = an itemised entry (eg the first entry under a multiple entry)
72 = multiple entry

The next two digits are the year and
The next three digits are the day number

The last digits are unique to the entry.

Example Entry ID: 701432834764372000
This i an individual entry on day 328 in 2017 with the reference 34764372000

Fields 23-25	If the entry has been exchanged to the currency of the account in connection with booking, exchange information may be displayed in these fields.
Fields 26-28	If the entry has been received via another bank which has exchanged the amount before transmitting it for booking, the initial information may be displayed in these fields.
Fields 29-69	The fields may contain up to 41 message lines.
Field 70	If the entry is created as a payment with creditor reference, creditor reference will be shown here. The creditor reference will also appear from field 9 ENTRY TEXT.
Field 71	End-to-end reference is a free text field, where the debtor can enter a reference making it easier for the creditor to identify the payment.

Endrecord (**(ED999999999999)**

Field	Data name	Format	To be complete d	Description
1	Transaction type	X(14)	Yes	Payment type = ”ED999999999999”
2	Creation date	9(8)	Yes	Creation date (YYYYMMDD)
3	Creation time	9(6)	Yes	Creation time of export (HHMMSS)
4	Number of transactions	9(5)	Yes	Number of transactions
5	Total amount	9(15)	Yes	Total amount, the aggregate of the field "Entry amount"
6	End	X(2)	Yes	<CR><LF>

Field no.   **Description**

Field 2   Creation date of file with preceding account entries. The date must correspond with the date of "Account entries (Start record)".

Field 3   Creation time of file with preceding account entries. The time must correspond with the time of "Account entries (Start record)".

Field 4   Count of entries of type "ED010103000005"
                        placed between the preceding "Account entries start" and this record.

Field 5   Count of "Entry amount" in record type "ED010103000003" without any sign placed between the preceding "Account entries start" and this record. The amount is positive (hash total).

Account entries, 6th edition, Individual Entries, decimal separator: Dot

Account entries

Structure

Account entries have a start record, a number of entry records and an end record. All entry records are itemised entries. The multiple entries which can be viewed in Online Banking will not be displayed in the extract of account entries.

6th edition can be found in the following variations:

Startrecord (**ED000000000008)**

Field	Dataname	Format	To be com-plete d	Description
1	Transaction type	X(14)	Yes	Paymenttype = "ED000000000008 "
2	Creation date	9(8)	Yes	Creation date (YYYYMMDD)
3	Creation time	9(6)	Yes	Creation time (HHMMSS)
4	End		Yes	<CR><LF>

Field no.   **Description**

Field 2   Creation date of file with subsequent account entries. The date must correspond with the date of "Account entries (End record)".

Field 3   Creation time of file with subsequent account entries. The time must correspond with the time of "Account entries (End record)".

Entryrecord (ED010103000008)

Field	Data name	Format	To be com-pleted	Description
1	Transaction type	X(14)	Yes	Payment type = "ED010103000009"
2	Record serial no.	9(5)	Yes	Consecutive record number
3	Book date	9(8)	Yes	Book date (YYYYMMDD)
4	Entry amount	9(15)	Yes	Amount with two decimals. If the amount is negative the field contains a leading "-". Decimal separator: Comma

Field	Data name	Format	To be com- pleted	Description
5	Account type	9(1)	Yes	Contents of "Account no.", field 6 "1" = Financial account "2" = Bank account
6	Account no.	9(15)	Yes	Account number
7	Value date	9(8)	See below	Value date (YYYYMMDD)
8	Balance	9(15)	Yes	Balance after the entry. Amount with two decimals. The field contains a leading "-" if the amount is negative. Decimal separator: dot

18	Debtor ID	X(35)	See below	Debtor's identification of payment
19	Your reference	X(35)	See below	Debtor's identification of payment
20	Attachment no.	X(10)	See below	Attachment number
21	Entry ID	9(18)	See below	Bank's identification of entry
22	Entry currency	X(3)	Yes	Entry currency
23	Exchange rate	9(15)		Exchange rate, six decimals
24	Amount exchanged	9(15)		Amount exchanged
25	Exchange fee	9(15)		Exchange fee
26	Initial currency	X(3)		Initial currency
27	Initial exchange rate	9(15)		Initial exchange rate, six decimals
28	Initial amount	9(15)		Initial amount (currency)
29	Message line 1	X(35)		Message text
30-68	Message lines 2-40	X(35)		Message text
69	Message line 41	X(35)		Message text

Field	Data name	Format	To be completed	Description
70	Creditor reference	X(35)	Se below	Transfer with creditor reference
71	End-to-end- reference	X(35)	Se below	Completed only if the sender has entered a value in the field
72	End	X(2)	Yes	<CR><LF>

Field no.	**Description**
Field 6	The field may contain a bank account or financial account. The account type is determined by field 5 "Account type".

Bank account:

Bank account format: The bank account is 15 characters long and is composed of the following:
9(1) = 0
9(4) = Registration number
9(10) = Account number

Example: Export of entries from bank account no. 1111 1234567. Bank account format: "011110001234567".

Financial account:

Financial account format: The financial account is 15 characters long.

Example: Export of entries from financial account no. 123. Financial account format: "000000000000123".

Field 7	The field is completed only if the bank has entered a value date.
Field 8	Amount with two decimals. Decimal separator: Comma
Fields 11-15	The fields may contain information on the sender.
Fields 16-18	At least one of these fields is completed if a message has been attached and none of the message line fields are completed.
Field 19	The field comes from a payment initiated by the debtor and is used to link a payment in the ERP system/payment in Online Banking to an entry in "From account", eg for automatic marking of invoices paid.
Field 20	The field is exported from Online Banking if a reference has been entered in the list of account entries.

Field 21	The entry ID is composed as follows:
	The first two digits determine the type:
	70 = an individual entry 71 = an itemised entry (eg the first entry under a multiple entry) 72 = multiple entry
	The next two digits are the year and The next three digits are the day number
	The last digits are unique to the entry.
	Example Entry ID: 701432834764372000 This is an individual entry on day 328 in 2017 with the reference 34764372000
Fields 23-25	If the entry has been exchanged to the currency of the account in connection with booking, exchange information may be displayed in these fields.
Fields 26-28	If the entry has been received via another bank which has exchanged the amount before transmitting it for booking, the initial information may be displayed in these fields.
Fields 29-69	The fields may contain up to 41 message lines.
Field 70	If the entry is creates as a transfer with creditor reference, creditor reference will be shown here. Creditorreference will also appear from field 9 ENTRY TEXT.
Field 71	End-to-end reference is a free text field where the debtor can enter a reference making it easier for the creditor to identify the payment.

Endrecord (**(ED999999999999)**

Field	Data name	Format	To be com-plete d	Description
1	Transaction type	X(14)	Yes	Payment type = "ED999999999999"
2	Creation date	9(8)	Yes	Creation date (YYYYMMDD)
3	Creation time	9(6)	Yes	Creation time of export (HHMMSS)
4	Number of transactions	9(5)	Yes	Number of transactions

Fiel d	Data name	Format	To be com-plete d	Description
5	Total amount	9(15)	Yes	Total amount, the aggregate of the field "Post-amount"
6	End	X(2)	Yes	<CR><LF>

Field no.	**Description**
Field 2	Creation date of file with preceding account entries. The date must correspond with the date of "Account entries (Start record)".
Field 3	Creation time of file with preceding account entries. The time must correspond with the time of "Account entries (Start record)".
Field 4	Count of entries of type "ED010103000005" placed between the preceding "Account entries start" and this record.
Field 5	Count of "Entry amount" in record type "ED010103000003" without any sign placed between the preceding "Account entries start" and this record. The amount is positive (hash total).

CSV-Extracts, 4th version, Account entries

CSV-Extracts

Structure CSV extracts (Account entries) have a startrecord, a number of entry records and an endrecord. All entry records are itemised entries. The multiple entries which can be viewed in Online Banking will not be displayed in the extract of account entries.

4th version, csv can be found in the following variations: As individual entries and multiple entries.

	Startrecord	Entryrecord	Endrecord
Decimal: Comma		ED010103000010	ED

Special considerations

Special attention should be paid to date and digit formats in the control panel when requesting extracts. The computer's language must be set to Danish. There may be a conflict between the below formats and eg Excel formats.

Entry record (ED010103000010)

Field	Datanavn	Format	Udfyldes	Beskrivelse
1	Transaction type	X(14)	Yes	Payment type = "ED010103000010"
2	Serial no.	9(5)	Yes	Consecutive numbering of entries in the file
3	Account type	9(1)	Yes*	Account type in field 4: "1" = Financial account "2" = Bank account
4	Account number	X(35)	Yes*	An ordinary account in Denmark consists of a registration number and an account number. Format: RRRRKKKKKKKKKK with leading zeroes. Example: 12340001234567
5	Book date	X(10)	Yes	Format: DD-MM-YYYY Choose the above date format in Windows control panel.
6	Value date	X(10)	See below	Format: DD-MM-YYYY
7	Entry text	X(70)	Yes	Entry text
8	Currency	X(3)	Yes	Currency code of entry amount (equal to account currency)
9	Amount	9(15.2)	Yes	Amount with two decimals. Negative amounts are stated with a leading "-". Example: -79,00. No thousand separator. Example: 47842,25
10	Final post	X(0)	No	Prepared to indicate whether the entry is final or provisional. Preliminary posts may change during the day
11	Balance	9(15.2)	Yes	Amount with two decimals. Negative amounts are stated with a leading "-". Example: -79,00. No thousand separator. Example: 47842,25
12	Checked	X(0)	No	Field is prepared to indicate whether an entry is checked.
13	Your reference	X(35)	Yes	Completed only if a reference is registered on the entry
14	Sender information	9(1)	Yes	Indicates whether sender information fields have been completed. "0" = Sender information not provided "1" = Sender information provided
15	Sender information 1	X(35)	See below	Sender information
16	Sender information 2	X(35)	See below	Sender information

21	Reference	X(35)	See below	Reference to primary document

Fiel d	Datanavn	Format	Udfyl- des	Beskrivelse
22	Debtor ID	X(35)	See below	Debtor's identification of paymen
23	Entry ID	9(18)	Yes*	Bank's identification of entry
24	Exchange currency	X(0)	No	Field to be implemented later
25	Amount exchanged	9(15.2)	See below	Currency amount to be exchanged
26	Exchange rate	9(11.6)	See below	Exchange rate
27	Exchange fee	9(15.2)	No	Exchange fee
28	Initial currency	X(3)	No	Currency code of initial currency
29	Initial amount	9(15.2)	See below	Initial entry amount before exchange
30	Initial exchange rate	9(11.6)	See below	Exchange rate of initial amount
31	End-to-end Reference	X(35)	See below	Completed only if the sender has entered a value in the field
32	Creditor reference	X(25)	See below	Payment with creditor reference
33	Reserved	9(0)	No	Prepared for entry codes (book code) ac- cording to PBS list Field to be implemented later
34- 74	Message lines 1-41	X(35)	No	One field per message line
75	End	X(2)	Yes	<CR><LF>

Field no.	Description

Field 4

The field may contain a bank account or financial account. The ac-count type is determined by field 3 "Account type".

Bank account:

Bank account format: The bank account is 14 characters long and is composed of the following:

9(4) = Registration number
9(10) = Account number

Example: Export of entries from bank account no.
1111 1234567. Bank account format: "11110001234567".

Field 6

The field is completed only if the bank has entered a value date.

Fields 15-19

The fields may contain information on the sender.

Fields 20-22

At least one of these fields is completed if a message has been at-tached and none of the message line fields are completed.

Field 23

The entry ID is composed as follows:

The first two digits determine the type:

70 = an individual entry
71 = an itemised entry (eg the first entry under a multiple entry)
72 = multiple entry

The next two digits are the year and
The next three digits are the day number

The last digits are unique to the entry.

Example Entry ID: 701432834764372000
This is an individual entry on day 328 in 2017 with the reference
34764372000

Fields 24-27	If the entry has been exchanged to the currency of the account in connection with booking, exchange information may be displayed in these fields.
Fields 28-30	If the entry has been received via another bank which has exchanged the amount before transmitting it for booking, the initial information may be displayed in these fields.
Field 31	End-to-end reference is a free text field where the debtor can enter a reference making it easier for the creditor to identify the payment.
Field 32	If the entry is created as a payment with creditor reference, creditor reference will be shown here. The creditor reference will also appear from field 7 ENTRY TEXT.
Fields 34-74	The fields may contain up to 41 message lines.

End record (ED999999999999)

Field	Data name	Format	To be com-plete d	Description
1	Transaction type	X(14)	Yes	Payment type = "ED999999999999"
2	Creation date	9(8)	Yes	Creation date (DD-MM-YYYY)
3	Creation time	9(6)	Yes	Creation time (HHMMSS)
4	Number of transactions	9(5)	Yes	Number of account entries
5	Total amount	9(15)	Yes	Total amount, the aggregate of the field "Entry amount"
6	End	X(2)	Yes	<CR><LF>

Field no.	Description
Field 2	Creation date of file with preceding account entries. The date must correspond with the date of "Account entries (Start record)".
Field 3	Creation time of file with preceding account entries. The time must correspond with the time of "Account entries (Start record)".
Field 4	Count of entries of type "ED010103000010" placed between the preceding "Account entries start" and this record.
Field 5	Count of "Entry amount" in record type "ED010103000010" without any sign placed between the preceding "Account entries start" and this record. The amount is positive (hash total).

Balance extracts

Balance information

Field	Data name	Format	To be completed	Description
1	Account holder	X(32)	Yes	Account holder
2	SE No-CPR No	9(10)	Yes	SE number or CPR number
3	Account number	X (35)	Yes	Registration number and account number. An ordinary account in Denmark consists of a registration number (R) and an account number (K). (RRRRKKKKKKKKKK) As regards ICM accounts the field has been completed with BBAN or IBAN.
4	Type	X(10)	See below	Account type
5	Name	X(35)	Yes	Name of account (eg "overdraft facility")
6	Currency	X(3)	Yes	Currency of account
7	Balance	9(15.2)	Yes	Balance in currency of account. Amount with two decimals. Negative amounts are stated with a leading "-". Example: -9579,00. No thousand separator
8	Credit line	9(15)	Yes	Any facility associated with the account
9	Available balance	X(15.2)	See below	Amount with two decimals. Negative amounts are stated with a leading "-". Example: -9579,00. No thousand separator
10	Balance in DKK	9(15.2)	Yes	Same content as field 7 converted into DKK via current average rate.
11	Available balance in DKK	X(15.2)	See below	Same content as field 9 converted into DKK via current average rate
12	Date of extract	X(10)	Yes	Date of extract creation (DDMMYYY)
13	Date of most recent movement	X(10)	Yes	Date of most recent account movement (DDMMYYYY)
14	BIC address	X(11)	Yes	SWIFT address of account-holding bank. Only in connection with ICM accounts.
15	Accrued interest	9(12.2)	Yes	Amount with two decimals. Interest not charged to the account.

Field no.	Description
Field 4	Completed with "account" or "ICM account"
Field 7	As regards ICM accounts any credit line is not displayed.

Field 9/11	As regards ordinary accounts the field contains an aggregate of the current balance + any credit line of the account. If the account forms part of a facility, the field will be completed with the various balances. If the account is an ICM account, the field will contain the current value balance, ie a current balance adjusted for entries with value dates later than the extract date (field 12).
Field 12/13	Please note as regards ICM accounts: Due to the different time zones of foreign banks, the extract may have been created before the foreign bank has transmitted "end-of-day" bank statements.
